Addiction and Rehabilitation of Addicts

Dr. Mostafa Eghlima

Abstract:
Consumption of narcotic drugs has a long record in human societies. Drug addiction is considered as a social problem nowadays which has affected the economic-cultural and economic-social dimensions of the country. In examining the dimensions of drug addiction, one must pay attention to the issues of dependency on drugs, drug addicts and rehabilitation of drug addicts.
In examining the phenomenon of addiction and its analysis as a social scourge, the issue can be analyzed at different levels including the social structures, the relationship between the individual and the society and individual matters. Another theory considered in this article is the designation of the causality hierarchy.
Two research methods have been used in this article for delineating and analyzing drug addiction. The first method is the content analysis method where one looks into the effective elements that lead to addiction and also its consequences. It also takes into consideration different theories related to the rehabilitation methods. Another method of analysis that is being used is related to detailed interviews and case studies conducted on drug addicts. Another method is the statistical method which elaborates on the phenomenon of addiction in a statistical way and depicts one-dimensional or two-dimensional charts focusing on variables. The relationship between these variables are evaluated through statistical tests and eventually proposes the strategy aimed at the elimination of drug addiction.

Key Words: Addiction, Rehabilitation and Individual’s Relationship with Society and Family

Moreover, the results of factor analysis indicated three factors which were named as the A factor (Addiction), N factor (Neurosis) and E factor (Emotional).

Key Words: Normalization, MMPI-2, high-risk addiction factors, addiction potential, admitting drug consumption and factor analysis.
