## Abstract

**Objective:** The purpose of this study was to compare the temperament and character dimensions in narcotics addicted and normal persons. **Method:** The method of research was causative-comparative. The study sample consisted of 120 addicts and non addicts who had referred to 3 narcotics addicts treatment centers in Ardabil city. The subjects were selected through simple random sampling. To collect data, temperament/character inventory were used. **Findings:** The results showed that novelty seeking and harm avoidance in addicts is significantly greater than normal persons. Also, results showed that reward dependence, self-directedness, and cooperativeness in narcotics addicts is significantly lower than normal persons. **Conclusion:** The results show that temperament and character dimensions determine the addiction intensity in addicted people.

**Key words:** addict, temperament, character
